

eJPT Lab Notes & Terminal Workflow

A ready-to-use local notes workflow: lab folders, nano/GUI editor, tmux panes, script logging, saved Nmap output, tee, and a reusable notes template.

➤ Abdullah Nasser Almsan – Personal Pentest Reference

Usage note: For local notes on Kali. Do not publish sensitive lab credentials or uncleaned loot/terminal logs in a write-up or portfolio.

Contents

1. Prepare the lab folder before starting
2. Simplest option: nano
3. Want a separate GUI window? Use an editor already installed
4. Best workflow: tmux
5. Log everything that passes through the terminal
6. Save tool output at the source
7. Ready notes template
8. Suggested practical screen layout
9. Before ending the lab

1. Prepare the lab folder before starting

Organizing from the first minute prevents losing results.

KALI TERMINAL

```
mkdir -p ~/labs/[TARGET]/{scans,web,loot,notes}
cd ~/labs/[TARGET]
touch notes/notes.md
```

Folder	What goes there
scans/	Nmap and discovery results.
web/	URLs, requests, and web files.
loot/	Files downloaded from the lab target.
notes/	Notes and terminal log.

2. Simplest option: nano

KALI TERMINAL — Open notes

```
nano notes/notes.md
```

NANO — Save

Ctrl+O then Enter

NANO — Exit

Ctrl+X

nano is ideal when you want everything in the terminal. Keep personal notes on Kali rather than editing them on the target.

3. Want a separate GUI window? Use an editor already installed

Useful for pasting text and leaving notes open beside the terminal.

KALI TERMINAL — Mousepad if installed

```
mousepad notes/notes.md &
```

The & runs the editor in the background so the same terminal remains usable.

KALI TERMINAL — Alternatives if installed

```
xed notes/notes.md &  
gedit notes/notes.md &  
kate notes/notes.md &
```

You do not need to install a special notes app. Check which mousepad xed gedit kate and use what already exists.

4. Best workflow: tmux

Split one session so commands, notes, and helper commands stay organized.

KALI TERMINAL — Start session

```
tmux new -s ejpt
```

Shortcut	Action
Ctrl+b then "	Horizontal split
Ctrl+b then %	Vertical split
Ctrl+b then arrows	Move between panes
Ctrl+b then c	New window
Ctrl+b then d	Detach without closing
tmux attach -t ejpt	Return to session

TMUX PANE 2 — Notes example

```
nano notes/notes.md
```

A simple layout: Pane 1 for Nmap/Burp/Shell, Pane 2 for notes.

5. Log everything that passes through the terminal

Useful when you forget a version or result that appeared an hour ago.

KALI TERMINAL — Start logging

```
script -a notes/terminal.log
```

LOGGED SHELL — End logging

```
exit
```

KALI TERMINAL — Search later

```
grep -in "apache" notes/terminal.log  
grep -in "password" notes/terminal.log
```

Note: terminal.log can contain lab passwords or tokens. Do not publish it or add it to a portfolio without cleaning it.

6. Save tool output at the source

Better than relying on scrollback.

KALI TERMINAL — Nmap all main formats

```
nmap -sC -sV -oA scans/initial [TARGET]
```

This creates .nmap, .gnmap, and .xml files.

KALI TERMINAL — Any command with tee

```
[COMMAND] 2>&1 | tee scans/output.txt
```

You see the output while saving it.

KALI TERMINAL — Append instead of overwrite

```
[COMMAND] 2>&1 | tee -a notes/command-output.txt
```

7. Ready notes template

NOTES TEMPLATE

```
# TARGET
IP:
Scope:
Goal:
# PORTS / SERVICES
-
# WEB / URLs
-
# USERS
-
# CREDS
-
# FILES / LOOT
-
# FINDINGS
-
# COMMANDS THAT WORKED
-
# FAILED ATTEMPTS
-
# NEXT STEPS
-
# FLAGS / ANSWERS
-
```

Record meaningful failed attempts too so you do not repeat the same work later.

8. Suggested practical screen layout

LAYOUT

Pane 1: Nmap / Web / Reverse Shell	
Pane 2: notes.md IP / Ports / Creds	Pane 3: helper cmds grep / curl / etc.

On a small screen, two windows - Terminal + a simple editor - are enough. Organization matters more than window count.

9. Before ending the lab

Step	Action
1	Confirm notes.md has IP/ports/creds/flags.
2	Save Nmap using -oA.
3	End script logging with exit.
4	Do not publish real credentials or raw loot.
5	Write three lines: How did I get in? What did I discover? Which command saved time?

Prepared as a quick-reference companion to the canonical Arabic guide. Use only in labs or systems you are explicitly authorized to test.
